

## Evening Brief

Date/Time Stamp: **Saturday, August 15, 2015 - 10:36 PM**

---

### Weather Summary

A cold front has moved through Idaho bringing much cooler temperatures and dry westerly flow in it's wake. Generally mild, sunny conditions will continue across the north and west through the weekend. Winds will generally be light through the weekend, except along the Snake River Plain where westerly flow could be enhanced by the terrain.

Isolated thunderstorms will likley develop once again today over the higher elevations of central and eastern Utah, but then decrease for Sunday/Monday.

Another trough will drop into the Northern Rockies on Monday/Tuesday keeping temperatures near to just below normal for the time of year. The bulk of moisture associated with this system will stay east of the Great Basin. This enhanced northerly flow will push the very dry air from the north down into southern Utah and southern Nevada for drying fuels in those regions.

Generally dry northwest/westerly flow will continue regionwide through the workweek next week.

---

### Preparedness Levels

#### Current:

Great Basin	4
National	5

---

### Great Basin Fire Activity:

**New Fires and Acres: 16 fires 136.1 acres**

Moderate IA activity continues in Northern Nevada and Western Idaho.

---

### Resources:

GBCC is below draw-down.

There are no IMT's, Type 1 IHC's, National Caterers, Shower units, engines, crews, helicopters.

---

### Great Basin Fire Potential Summary

Fire Danger will be moderating somewhat across the north with cooler temperatures, lighter winds and a lack of new lightning ignitions. The air mass remains dry however, with low afternoon RH.

Further south across southern Nevada and Utah the fire danger will be gradually increasing as the air mass dries out and fire danger indices increase.
